

Insert or remove SIM card

Your phone might support using an eSIM (embedded SIM card), in addition to the physical SIM card. Contact your carrier for details.

Set up eSIM

If your carrier provided you with an eSIM:

1. If you don't have a network connection, [connect to Wi-Fi](#).
2. Go to **Settings** > **Network & internet** > **SIMs & mobile network**.
3. Tap the option to download and set up an eSIM, then follow onscreen instructions.

Insert or remove physical card

1. Insert the SIM tool into the tray hole and gently push to pop it out.

2. Insert (gold contacts up) or remove the card.

2. If you're using two SIMs, turn the tray over. Then insert (gold contacts up) or remove that card.

To see if your phone supports two physical SIM cards, go to **Settings** > **About phone** > **Device details**. If you see **Phone number (sim slot 1)** and **Phone number (sim slot 2)**, then you can use two physical SIMs in your phone.
