

Use clock and weather widget

Add Moto Widget to home screen

Put a clock on your home screen and get quick access to alarms, your calendar, and the weather.

1. Touch & hold the home screen.
2. Tap **Widgets**.
3. Tap **Moto Widget** to view different styles of the widget to add:
 - For a simple widget with few icons and a digital clock (not analog), choose **Clean**.
 - For a basic analog clock with weather and your calendar, choose **Classic**. The outer ring shows remaining battery.
 - For a transparent widget that doesn't obstruct your wallpaper, with a choice of digital or analog clocks, and individual panels so you can swipe ▼ between weather, time, and settings, choose **Beyond**.
 - For a highly customizable widget that can show or hide date, time, weather, battery, alarms, fitness tracking, and more depending on how you size the widget, choose **Adapt**.
 - To see daily and hourly forecasts (no clock, calendar), choose **Weather**.
4. Touch & hold the style you want, then drag it to your home screen and release.
5. Follow onscreen instructions to set up the widget.

Customize and use the widget

Resize it

Touch and hold the widget to show its frame, then drag a side. Some widgets show more information when you expand their size.

Move it

Touch & hold the widget, then drag it around your screen or to a new panel. Release to place it.

Change clock style

Your phone came with the Clean style of the Moto Widget, which only has a digital clock. To use an analog clock, remove the widget (touch & hold, then drag it to **Remove**), then [add a different style for the Moto Widget](#), or [add a different clock widget](#).
