

Adjust screen brightness

To set your screen's brightness, open [quick settings](#) and slide .

Your phone automatically adjusts your screen to the light around you, with Adaptive brightness. When the feature is on, you can still fine tune the brightness in quick settings. To turn this feature off:

1. Go to [Settings](#) > **Display**.
2. Turn **Adaptive brightness** off.

Tips:

- If the lowest setting on the  slider is still too bright, you can [make the screen extra dim](#).
- If Adaptive brightness stops working as desired, you can [reset it](#) to retrain the system.
