

Forgot your folder's PIN/password/pattern?

If you don't remember how to unlock your secure folder, you'll need to delete the folder and set it up again.

1. Go to **Settings > Security & privacy > More security & privacy**.
2. Tap **Secure folder**.
3. Tap **Delete secure folder**.
4. Unlock your phone (use your fingerprint or the PIN/password/pattern for your phone).
5. Confirm the deletion.

This deletes all apps from the folder. If the app was **only** in your secure folder, you'll need to reinstall the app.
